

BINGHAM FLEXO SERVICES CORRUGATED METERING PRODUCTS

Plastic, Composite, and Steel Doctor Blades

Bingham Flexo Services distributes a complete line of doctor blades to suit every application, from brown box to highest level of graphics. Beveled UHMW plastic blades with wear resistant and lubricating additives are generally recommended for long-life in brown box applications. Graphic applications can require use of graphite, composite or steel blades with finely beveled or hardened edges. Please let us recommend the proper doctor blade for your application.

Ink Metering and Feed Rolls

Bingham Flexo Services distributes corrugated wipe and feed rolls covered with highly durable cast urethane or rubber elastomers. Typical wipe roll applications are covered in 65-75 durometer nitrile or urethane. Wipe rolls can be ground straight or with the appropriate parabolic crown. Feed rolls can be made from single durometer nitrile or urethane, but dual durometer urethane is recommended for improved durability with no-crush performance. Single durometer rolls are typically 30 durometer, while dual durometer urethane is comprised of a 30 durometer inner layer with a 65 durometer outer layer that is .032" thick. Manufacturing partners are National Roll Kote and Menges Roller.
